G rotary unions are high performance, high precision rotary unions for coolant, air, hydraulic and cutting oil applications. G rotary unions are generally applied to the machine tool industry.

Based on decades of mechanical seal design and application expertise, the G rotary union line is built to perform under the most demanding conditions. A thorough understanding of seal load optimization, seal wear characteristics, and application knowledge means G rotary unions can provide years of reliable service for coolant, air, and hydraulic oil applications.

Full Range of Standard and Custom Solutions

Up to six passages

Bearingless for high-speed

Bearingless compact design

Bearing-supported rotor-mounted

Two passages for high-pressure

High-pressure bearing supported bore-mounted

Multi-passages for high speed

All-in-one axial & radial inlet

Features

- Up to 42,000 RPM and 3,625 psi (250 bar)
- Standard and customized designs
- Full flow area
- Optimized seal balance ratio
- Different seal material combinations
- Mechanical seals in constant contact
- Low operational temperature

Benefits

- Demanding applications
- Versatile applications
- Minimal pressure drop
- Minimal turning friction
- Longer seal life
- No leakage from coolant to dry running
- Increased bearing life

Our Standard & Custom Solutions

G-Type GA	4
G-Type GAI	5
G-Type GFR/GFRA	6
G-Type GFL/GFLA	7
G-Type GFS/GFSA	8
G-Type GFP/GFPA	9
G-Type GHR/GHRA	10
G-Type GHS/GHSA	11
G-Type GHP/GHPA	12
G/50551 Custom Rotary Unions	13
G/5327 Custom Rotary Unions – Spindle Mounted	13
G/50318 Custom Rotary Unions	14
G/5007 Custom Rotary Unions	14
G/50151 Custom Rotary Unions	15
G/50356 Custom Rotary Unions	15
Multi-Passage Rotary Unions	17

1. Consult the factory for specific details. Depends on application parameters.

NOTE: For specific applications parameters, see catalogue page. Higher speed and pressure available upon request. Do not operate unions at a combination of maximum pressure, temperature, and speed.

Hydraulic Oil	1,500 (105)	250 (120)	3,500	6,000

INSTALLATION INSTRUCTIONS

Overview

- Precision ball bearings lubricated for life
- Hardened stainless steel rotor
- Optimized seal balance ratio for minimal friction
- Smooth running, no vibration
- Body available in anodized aluminium or brass
- Stationary seal face available in carbon graphite, bronze seal face for hydraulic oil above 1,000 psi (70) bar
- Possibility of customized tests on customer's parameters
- No leakage during tool change

INSTALLATION INSTRUCTIONS

Overview

- Compact design mounted inside shaft
- Hardened stainless steel rotor
- Optimized seal balance ratio for minimal friction
- Available with non-contracting seal ring with hydrodynamic grooves
- Anodized aluminium body

INSTALLATION INSTRUCTIONS

Overview

- Labyrinth seal and drain holes protect bearings
- Optimized seal balance ratio
- Silicon carbide seal faces resist wear and thermal shock
- Precision ball bearings eliminate vibration
- Anodized aluminium body
- Full flow area, minimal pressure drop
- Stainless steel spring located outside the flow
- Stainless steel rotor resists corrosion
- No leakage during tool change

Type GFL/GFLA

Overview

- Special seal design permits dry running
- Optimized seal balance ratio for minimal friction
- Precision angular contact bearings widely spaced to eliminate wobble and vibration
- Labyrinth seal and drain holes protect bearings
- Anodized aluminium body
- Reduced coolant misting for improved air quality
- Low heat generation in bearings and mechanical seal
- No leakage during tool change commutation
- Low vibration for precise machining
- Also available for rotation with compressed air
- Supplied with bearings run-in upon request
- Closing ring suitable for proximity sensing draw bar position

Overview

- Special seal design permits dry running
- Optimized seal balance ratio for minimal friction
- High precision angular contact bearings eliminate wobble and vibration
- Labyrinth seal and drain holes protect bearings
- Anodized aluminium body
- High-speed, dry run applications
- Reduced coolant misting for improved air quality
- Low heat generation in bearings and mechanical seal
- No leakage during tool change commutation
- Low vibration for precise machining
- Also available for rotation with compressed air
- Supplied with bearings run-in upon request
- Closing ring suitable for proximity sensing draw bar position

Overview

- Labyrinth seal and drain holes protect bearing
- Optimized seal balance ratio
- Silicon carbide seal faces resist wear and thermal shock
- Angular ball bearing design resists side loading
- Low vibration for precise machining
- Anodized aluminium body
- Full flow area, minimal pressure drop
- Multiple stainless steel springs located outside the flow
- Stainless steel rotor resists corrosion
- Closing ring suitable for proximity sensing draw bar position

Rotary Joint Type GHR/GHRA - PV Diagram

INSTALLATION INSTRUCTIONS

Overview

- Special seal design permits dry running
- Labyrinth seal and drain holes protect bearings
- Optimize seal balance ratio for minimal friction
- Anodized aluminium body
- Full flow area, minimal pressure drop
- Stainless steel rotor resist corrosion
- Long drawbar stroke for maximum flexibility
- No leakage during tool change commutation
- Large drain holes to evacuate coolant from the union
- Supplied with bearings run-in upon request
- Stainless steel springs located outside the flow

INSTALLATION INSTRUCTIONS

Overview

- Special seal design permits dry running
- Labyrinth seal and drain holes protect bearings
- Optimized seal balance ratio
- High precision angular contact bearings for high-speeds
- Anodized aluminium body
- Full flow area, minimal pressure drop
- Long drawbar stroke for maximum flexibility
- Seal to protect bearings for air pressure in rotor area
- Low heat generation in bearings and mechanical seal
- No leakage during tool change commutation
- Large drain holes to evacuate coolant from the union
- Supplied with bearings run-in upon request

Overview

- Low heat generation in bearings and mechanical seal
- Optimized seal balance ratio to minimise friction
- No losses during tool changeover
- Low vibration for precise machining
- Special seal design enables dry running
- Labyrinth seal and drain holes protect the bearings
- Also available for rotation with compressed air
- Anodized aluminium housing
- Supplied with sealed bearings on request
- Radial and axial input on the same coupling

A black and white photograph of a mechanical component, likely a motor or actuator. It features a cylindrical body with a flange at one end. The component is shown at an angle, highlighting its metallic texture and the flange's structure.

Dimensions in millimeters. For reference only and subject to change.

Overview

- Unique seal design prevents “accidental” leakage when both passages are pressurised
- Mechanical seal provides long life and positive sealing
- High precision ball bearings are lubricated for life
- Heat-treated (hardened) stainless steel rotor
- Drain holes can be connected to a drain line

Custom Rotary Unions G/50151

	Maximum RPM	P1			P2

Dimensions in millimeters. For reference only and subject to change.

Overview

- Low heat generation in bearings and mechanical seal
- Optimized seal balance ratio to minimize friction
- Low vibration for precise machining
- Special seal design enables dry running
- Labyrinth seal and drain holes protect the bearings
- Anodized aluminium housing
- Supplied with sealed bearings on request
- Radial and axial input on the same coupling

Custom designed unions are available in both housing-less and housed versions. When the rotary union you require is not shown in the catalogue, a team of engineers are ready to design and manufacture a custom union for your specific application.

Multi-Passage Rotary Unions

Inter-passage leakage may occur; check compatibility different fluids. *L tolerance = h6

Dimensions in millimeters. For reference only and subject to change.

Overview

- Multi-passage rotary unions for air and oil
- Precision ball bearings are lubricated for life
- Proprietary "slide" seal provides long life and dry-running
- Heat-treated (hardened) stainless steel rotor
- Drain holes can be connected to a drain line
- Designed for multi-station index tables

Recommendations

Installation and operation recommendations

G rotary unions are high-precision components that provide smooth running operation at high speeds. Due to the precise manufacturing tolerances, these unions require care during installation and maintenance.

Installation instructions are available online at coolantunion.com or from your local sales office.

Flexible hose

To ensure free movement of the union and elimination of side loading, the proper installation, type, and length of flexible hose should be used. SAE 100R1 Type AT single-braid hose is recommended. The minimum length of hose is 300 mm for a one-piece installation.

Hose should be a minimum of 300 mm long.

Rotor and Spindle Detail

Rotor dimension			Spindle connection		
Rotor	Pilot	C	X	Y	Z
M16 X 1.5	18	17.994/17.983	18.007/17.997	8.5	17
M16 X 1.5	16	15.994/15.983	16.007/15.997	8.5	17
M14 X 1.5	15	14.994/14.983	15.007/14.997	8.5	23
M12 X 1.25	14	13.994/13.989	14.005/14.000	8.5	17
M10 X 1	11	10.994/10.989	11.008/11.000	5.5	15

Lubrication

The seal faces in all G rotary unions are lubricated by the media (coolant, hydraulic oil, etc.) passing through the union. All ball bearings are lubricated for life and require no additional lubrication.

Filtration

The service life of the seal and the perfect operation of the rotating union is largely determined by filter quality: we recommend a filtering of 50 µm and a media purity of ISO 4406 – 17/15/12.

Guarantee

G unions are tested prior to shipment and are warranted against manufacturing defects for 12 months. A global sales and service network stands behind these products and provides support to more than 150 countries worldwide.

Discover Our Solutions

R/RH ROTARY UNION

The R rotary union connects stationary piping to a rotating device. The fluid is sealed by precision, micro-lapped seals that provide a uniform, full-flow design. The union is supported by two widely-spaced anti-friction bearings and is available with a bearing isolation system for added bearing protection. The R union is capable of intermittent dry running and features a carbon graphite seal inserted in stainless steel and silicon carbide counterseat.

The product utilises corrosion-resistant materials such as stainless steel and brass. The full-flow design allows for maximum flow rates with minimal restrictions.

This line of ball bearing unions is designed for tough applications where other rotary unions fail to perform.

R/RH STAINLESS STEEL ROTARY UNION

R/RH rotary unions can also be made also of stainless steel 316 for specific applications. Many different seal materials are offered to seal fluids with abrasive materials, glycol, fluids with crystallizing sugars or materials that require FDA or ATEX approved designs. The unions are supplied in a AISI 316 stainless steel casting or, when required, in machined surfaces for special cleaning requirements.

The R unions are available in sizes from 9 mm to 150 mm in both single and dual flow configurations.

The repair kit can be replaced without dismounting the joint from its application, having faster maintenance operations and possibility to quickly adapt the joint to fluids requiring different sealing materials.

Z ROTARY UNION

Z rotary unions are designed for thermal oil applications. The union is supported by two internal carbon guides (bearings) and can run up to 500 RPM and 300°C.

The proprietary antimony impregnated carbon seal ring is in a compression seal against the stainless steel nipple and seal plate. This seal package combination provides for a long-lasting and low maintenance rotary union. The Z rotary union is available in sizes from 3/4" to 2 1/2" with both flanged and threaded connections.

BCI™ ROTARY UNION

The Bearing Cover Inserted (BCI) rotary union is applied to continuous casting steel segment rolls on water service.

It is self-centering and mounted inside the bearing cover to protect the rotary union from breakouts and eliminates side loading caused by external flexible hoses. The ability to handle misalignment, the large flow area, and simple design make this rotary union a preferred design for new and rebuilt continuous casting roll segments. Field tests have proven the BCI rotary union capable of operating for multiple campaigns without requiring repair.

All materials of the BCI are corrosion-resistant stainless steel or bronze and the internal bearing surface is permanently lubricated. Because of its ability to tolerate dirty water with varying pH levels, the BCI rotary union provides exceptional performance in steel mill applications.

GLOBAL SUPPORT

Many suppliers have made a commitment to the international market. But few have taken that commitment as far as Kadant. To ensure products are available where they are needed, Kadant's critical and high-value components are manufactured in North America, Europe, South America, and Asia.

Because expert advice and prompt service are as important as the products, Kadant also has authorized representatives around the world. So wherever you are, Kadant products, service and support are close at hand.
